Corporate VPN Troubleshooting Guide

Connecting to the VPN
1. Launch the GlobalConnect VPN client.
2. Select the gateway "corp-vpn-gateway".
3. Enter your corporate credentials and approve the MFA prompt.

Troubleshooting a VPN that will not connect
1. Confirm you have an active internet connection.
2. Make sure the GlobalConnect client is version 7.2 or later.
3. Restart the GlobalConnect client and try again.
4. Flush the DNS cache and reconnect.
5. If still failing, restart your laptop and retry.

VPN error codes
- VPN-401: Authentication failed. Re-enter credentials and approve MFA.
- VPN-403: Access denied. Your account is not authorized for this VPN gateway. You must request VPN access through the IT access portal and wait for approval.
- VPN-408: Connection timed out. Check your network and retry.
- VPN-500: Gateway server error. Escalate to Level 2 support if it persists more than 30 minutes.
